

8-24-4

- Enhances plant growth responses
- Increases plant metabolism
- Increases root & shoot growth
- Healthier plants
- Increases plant food efficiency
- Increases stand uniformity
- Increases maturity from a quicker start
- Non-corrosive to equipment

- Better stand protection
- Long residual—protects roots and seed
- Excellent fertilizer mixing properties
- Higher yield potential
- Base protection insecticide with your seed treatment

8-24-4

Representing your LINK to a stronger, higher yielding harvest, Helena is excited to introduce our new row starter formulation—HYPERLINK XL 8-24-4

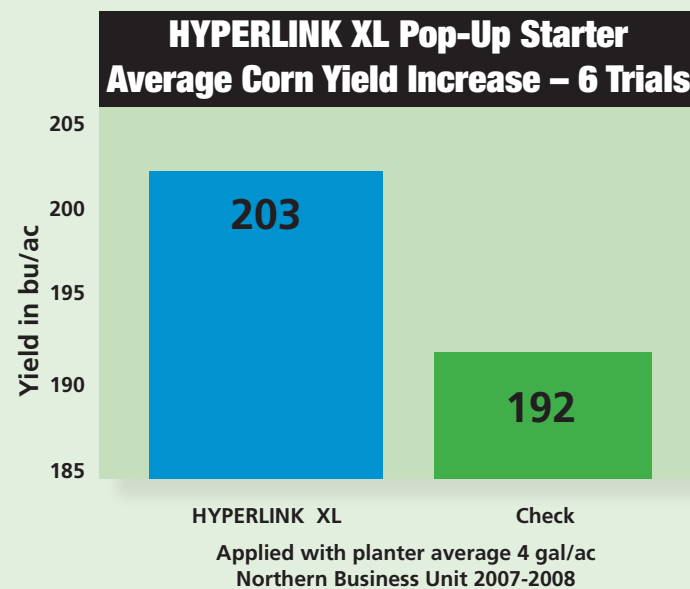

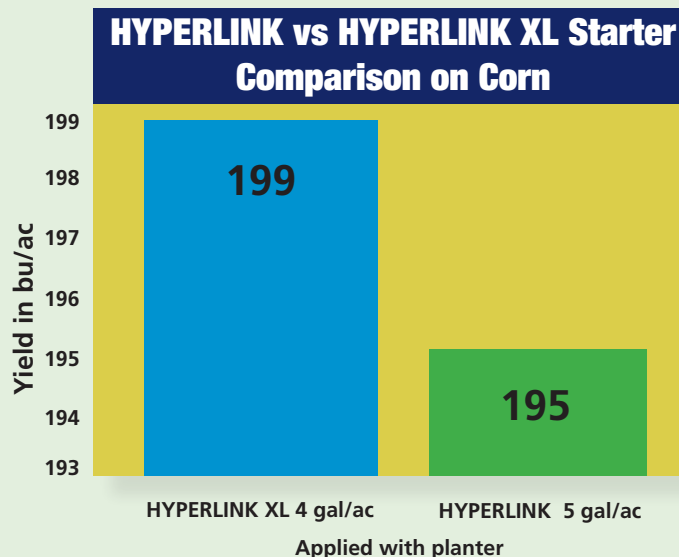

This high-quality product has many improvements over previous starters. In addition to a balanced load of nutrients, HYPERLINK XL offers seed safety and local service and support. Plus, it is non-corrosive to equipment.

A high-quality row starter like HYPERLINK XL adds a lot to your standard fertility program.

Placed in the seed furrow at planting, it delivers vital nutritional benefits to the plant at critical growth stages. Newly planted crops treated with HYPERLINK XL get off to a much stronger start, with higher yield potential, for a healthier, more productive crop.

Other benefits include a more uniform stand, increased plant food efficiency and earlier maturity.

Untreated corn in the middle section is visibly lighter green and shorter than the corn treated with HYPERLINK XL to the front, right and left.

HYPERLINK XL 8-24-4

Nitrogen(N).....8%
 Available Phosphate (P2O5).....24%
 Soluble Potash (K2O).....4%
 Gallons per Ton: 181.8
 Weight per Gallon: 11.00 lb

- EDTA chelated 7% Zinc
- Unique formulation of organic acids & other growth-promoting compounds
- Mixes easily with ortho- & poly-phosphate based starter fertilizer solutions
- Improved zinc availability & uptake
- Enhanced plant root structure
- Excellent crop safety

- Promotes increased root and root hair growth for optimum water and nutrient absorption by seedlings
- Stronger, healthier root system, with less lodging
- Low rate of 6 oz per acre—no premixing required

- Specialized liquid Zinc (10%) and Sulfur (4.5%)
- Growth-promoting agents
- Highly efficient uptake and availability
- Extended Zinc uptake
